

### Summary:

This is a flight data set visualization. Different types of graphs are made for arrival and departures according to origin and destination.

### Design:

Initially I choose line graph for monthly arrival and departures but later change it to bar chart and other kind of chart in order to have variety in visualization.

### Feedback:

- All graphs are line graph.
- Destination and origin flights graph
  - a. Please show total number of flights from origin to destination as well for each month.
- Give appropriate titles to x and y axis on each graph.
